## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **Part III DETAILED ACTION**

1. This application has been examined. Claims 1-20 are pending in this application. The election of species I (claims 1-13), without traverse is acknowledged. Claims 14-20 have been withdrawn from consideration.
2. Claim 1 is objected to because of the following informalities: It appears that the phrase "a one" should be changed to "an one". Appropriate correction is required.
3. Claim 6 is objected to because of the following informalities: It appears that the word "patter" should be changed to "pattern". Appropriate correction is required

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Omori et al. (7,271,824)

With regard to claim 1, Omori et al. teaches an image printing **(e.g. fig.2, which depicts the printing unit)** apparatus comprising; a clock generating means for generating **(e.g. item 70 of fig. 3)** means for generating a dot clock as a basis of each pixel forming an image **(reads on figs. 2-6, which depict the circuitry to form the image)**; image printing means for printing **(e.g. fig. 1)** a one-line image in a main scanning direction in accordance with image data with reference to the dot clock output from said clock generating means **(e.g. col.14, lines 9-14, the printing is done line by line)** , and printing a one-page image by repeating in the sub-scanning direction one-line image printing performed in the main scanning direction **(e.g. col. 17, lines 11-31. the sub scanning direction is perform to make any correction in the other scanning direction)**; and a clock control section (1007) which changeably controls a frequency of the dot clock during scanning of one line in the main scanning direction **(e.g. col. 8, line 61 thru col. 9, line 13, which describes the changing of high frequency by adjusting the clock).**

#### Conclusion

5. Claims 2-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record fails to teach or suggest an image printing apparatus having the features as described in claims 2-13.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Omori et al. (2003/0067533) is equivalent to US patent # 7,271,824.

Izumiya et al. (2002/0085241) teaches a clock generating circuit and image forming apparatus.
